Philadelphia, PA

EDUCATION

University of Pennsylvania, Philadelphia, PA

Aug. 2026 - May 2028 (Expected)

M.S.E in Systems Engineering, Concentration in Data Science

University of British Columbia, Vancouver, BC

Sept. 2022 - May 2026

B.A. in Economics, Minor in Data Science

GPA: 4.30/4.33 (3.91/4.0) — with High Distinction — Outstanding International Student Award

SKILLS

Product & Design: Product Requirements (PRD), Project Management, User Research, Competitive Analysis, User Flows, Prototyping (Figma), UX/UI Design, A/B Testing

Programming & Development: Python, SQL, JavaScript, HTML, CSS, React, Java, Git/GitHub

AI & Data: Cursor/Codex, Workflows (Coze), Prompt Engineering, AI Agents, Machine Learning, Data Processing

WORK EXPERIENCE

Cenbo Technology, AI Product Manager Intern, Beijing, CN

[Website](#)

May 2026 - Jul. 2026

- Created **AI Skills** and optimized **Coze workflows** for B2B AI-agent GEO (Generative Engine Optimization) diagnostics and product-data ingestion, automating standardized extraction from **200+ PDFs** across 12 document types and reducing a **2+ hour** manual process to **20 minutes**; created an SOP enabling a seven-person team to reuse the workflow independently.
- Developed a **0-to-1 PRD and interactive Figma prototype** for a WeChat Channels creator recommendation interface, defining **40+ data fields**, explainable recommendation logic, and human confirmation/rejection workflows.
- Diagnosed and redesigned an **AI-agent Coze workflow** with browser DevTools, identifying scope extension, hard-coded request dimensions, and caching issues; aligning AI summaries with authoritative dashboard metrics.
- Collaborated with strategy, data operations, and engineering teams on **LLM-assisted data classification**, prompt optimization, and quality standards; supported **582 product** mappings and achieved **85%+ accuracy** after two rounds of iteration.

Center for Disease Control and Prevention, Product Analyst Intern, Qingdao, CN

Jul. 2025 - Aug. 2025

- Contributed to the iteration of an infectious disease early-warning platform, translating public health requirements into **interface designs and information architecture** while balancing user needs with engineering constraints.
- Developed and evaluated **ARIMA, GRU, and LSTM** forecasting models for infectious disease trends, improving prediction accuracy by **13%**; created **R-based** visualizations to support interpretation of forecasting results.
- Integrated a **Coze AI workflow** into the early-warning process and conducted **A/B testing** on information retrieval, improving retrieval efficiency by **18%** and streamlining access to relevant monitoring information.

UBC Sauder School of Business, Research Assistant, Vancouver, CA

May 2025 - July 2025

- Collected and processed **~550,000** analyst reports from LSEG Workspace; built a large-scale firm-level dataset (**~5000** tickers) with financial text processing pipelines in **Python**, to systematically track report availability and analyst coverage.
- Developed **Python** scripts to extract prediction targets and modeling methods from **unstructured** analyst reports, supporting large-scale financial **text mining** and **data transformation**.
- Improved **LLM** text extraction by optimizing prompts and refining rule-based Python hard-coding methods, evaluating bad cases to improve targeted keywords extraction accuracy by **~7%** and sensitivity and reduce false negatives by **~30%**.

RESEARCH PROJECTS

Merble – Loan Requirement Recognition System, Product Designer & Independent Developer

2026

- Designed a **B2B workflow system** to help bank loan officers identify and prioritize members with emerging borrowing needs from behavioral signals.
- Developed an interpretable multi-signal scoring framework based on **urgency, potential loan size, and conversion probability**, generating ranked alerts with explanations to support human review and reduce black-box decision risk.
- Built a lightweight **Streamlit dashboard** with actionable alert cards and next-step recommendations, connecting signal detection with a human-in-the-loop follow-up workflow.

AI Chatbot Matching Website, Product Lead / UBC Figmalytics Hackathon

[prototype](#)

2026

- Designed a **0-to-1 AI tool matching product**, conducting 5 user interviews and analyzing **187 survey responses** to identify user confusion and choice overload across chatbot products.
- Conducted **competitive analysis** across three relevant popular products and translated research findings into user flows, matching logic, and UI/UX design.
- Created end-to-end **Figma prototypes**; built and iterated an MVP based on user feedback using **Claude and Antigravity**.
